

First Cybersecurity Task: Google Yourself -How safe Am I Online

Personal Reflection

While Googling my name and email, I was relieved to find that there was no personal information, old social media accounts, or photos publicly available. I also checked my email on haveibeenpwned.com and was glad to see that it hasn't been involved in any data breaches. This reassured me that my efforts to stay secure online are working. I've always been aware of the threats to online privacy, so I make it a point to use strong, unique passwords, enable two-factor authentication, and regularly monitor and update the security settings of my accounts. This task reinforced the importance of staying proactive about cybersecurity—it's not just a good habit, it's a necessary one.
